

Access to facilities

Updated on February 9, 2014

Thanks to its focus on engineering sciences, Grenoble INP owns state-of-the-art facilities distributed in various research laboratories, as well as some major experimental facilities based in its own dedicated structures and available to businesses.

Resources for your technological development projects

- CIME (intervarsity microelectronics center)
- CMTC (shared technological resource consortium)
- CREMHyG (Grenoble hydraulic machinery research and test centre)

Other technology platforms, for instance in IT or microelectronics, may also be accessible to businesses for design, research and development. A recent example is the [Minatec](#) platform, which will open in 2006. Some of its facilities, clean rooms, presses, cavitation tunnels, design and modeling codes and PC clusters are reserved for business use.

[INPG Enterprise SA](#) vous aide à identifier la ressource correspondant à votre besoin et est en mesure de vous proposer des modalités d'utilisation.
